PROFILE

Backend Engineer (Go) with a full-stack background - 4+ years of production experience across Go backend systems and React/TypeScript interfaces. Recently built three production-style Go systems covering REST APIs, async job queues, Redis-backed high-throughput serving, and distributed systems patterns. Strong frontend depth makes cross-functional collaboration and API integration second nature.

SKILLS

Languages: Golang, TypeScript, JavaScript, Node.js

Backend: pgx/v5, PostgreSQL, Redis, Docker, golang-migrate, slog, REST APIs

Frontend: React.js, Next.js, Tailwind CSS, ShadcnUI, Framer Motion

Databases: PostgreSQL, Redis, MongoDB, MySQL, SQLite

Fundamentals: Data Structures, Algorithms, System Design, Concurrency Patterns

AI Tools: Claude Code, Codex, Opencode

Tools: Git, GitHub, Docker, Postman, Linear, Figma

BACKEND & SYSTEM PROJECTS

[Result Lookup](#)

- High-throughput exam result API simulating Bangladesh's SSC-like result publishing infrastructure, designed to serve 2M student results at a single fixed publish moment. Precomputes all results into Redis as pre-serialized JSON before T0, uses a publish gate for atomic release, and falls back to Postgres under Redis failure with connection limitation.
- Load tested with hey — 31,910 RPS peak on a single instance, zero errors across 615,000 total requests. p99 under 105ms at 1,000 concurrent connections.
- Tech: Golang, PostgreSQL, Redis, pgx/v5, Docker, golang-migrate

[URL Health Checker](#)

- Async job processing system — background worker claims jobs via SELECT ... FOR UPDATE SKIP LOCKED, performs HTTP health checks, retries on failure with exponential backoff. Two binaries (API + worker) sharing a PostgreSQL-backed queue with no external message broker.
- Stale-job recovery baked into the claim query (staleness threshold replacing a heartbeat process); exponential backoff written in SQL for atomic retry state; graceful shutdown via signal.NotifyContext.
- Tech: Golang, PostgreSQL, pgx/v5, Docker, golang-migrate

[URL Shortener API](#) | [Source](#)

- Production-style REST API with raw SQL (no ORM), versioned migrations, structured logging, and full unit + integration test suite. Deployed live on Render.
- Per-IP token bucket rate limiter built from scratch using a generic mutex-protected SafeMap — refill/consume logic runs inside a single locked Update call, verified with Go race detector (-race) under concurrent load.
- Tech: Golang, PostgreSQL, pgx/v5, Docker, golang-migrate

EDUCATION

BGC Trust University, Chattogram, Bangladesh

2022–2023

B.Sc. in Computer Science and Engineering (Dropout)

PROFESSIONAL EXPERIENCE

Devspace

March 2026 – Present

Software Engineer

- Building AI-powered product features, integrating agentic AI workflows (Mastra AI, Vercel AI SDK) into a production React/TypeScript application.
- Tech: React, TypeScript, Mastra AI, Convex, Vercel AI SDK, Gemini

Osilion

Oct 2025 – Feb 2026

Full-Stack Engineer

- Developed and maintained full-stack features for an intelligent recruitment platform, contributing to technical architecture decisions and component design patterns.
- Tech: Next.js, TypeScript, Azure, PostgreSQL, Tailwind CSS, ShadcnUI

Hone

Aug 2025 – Sep 2025

Frontend Engineer

- Built and maintained user interfaces for Web and Desktop applications, focusing on clean UI, performance, and scalable component architecture.
- Tech: React, TypeScript, Tailwind CSS, ShadcnUI

Hello World Communications

Sep 2024 – Jul 2025

Full-Stack Engineer

- Built and maintained frontend applications, backend services, and APIs across multiple concurrent client projects for a software development agency.
- Tech: Next.js, TypeScript, Drizzle ORM, Appwrite, Firebase, Docker

Bilsida

Oct 2023 – Aug 2024

Full-Stack Engineer

- Built core product UI and backend integrations from scratch for a Swedish car marketplace startup, helping take the product from early development to investor-ready state.
- Tech: Next.js, TypeScript, Appwrite, Docker

Freelancer (Fiverr)

2021 – Oct 2023

Full-Stack Developer

- Built and delivered full-stack web applications and APIs for multiple clients across frontend, backend, and deployment workflows.

ADDITIONAL INFORMATION

Languages: English (professional), Bengali (native)

Interests: Distributed systems, open source, astronomy, philosophy
